

DISABILITY SERVICES

Prospering under the National Disability Insurance Scheme

The impending National Disability Insurance Scheme (NDIS) which will transform the way services are funded and delivered, will provide a challenge for conventional administration software applications. For service providers to operate under the new scheme, their software application must be able to cater for the new administrative requirements.

Liveware Solutions a Microsoft® Partner Network Member delivers a turn-key solution that accommodates the proposed changes. It eliminates spread sheets and disconnected band-aid applications that leave your employees disengaged and confused. The key to prospering under the NDIS will be to have a fully integrated solution that caters for both Client Management and Business Administration.

The solution is delivered via two integrated applications:

1. CIMSability (CIMS); a purpose built application that encompasses all aspects of Client Management.
2. Microsoft Dynamics® NAV (NAV); a powerful business application that is highly suitable for the stringent department reporting requirements of the Disability Services industry. Features include:
 - Financials/ Budgeting, A/P, A/R,
 - Human Resources Management & Payroll
 - Inventory Management, Manufacturing, Service & Project-based functionality (optional)

Liveware Solutions has developed specialised enhancements into NAV specifically for Disability Service organisations. These enhancements allow your organisation to:

- Integrate CIMS to NAV at a client ID level; all financial activity within NAV is tagged with client information which delivers a business intelligence capability. For example; a Statement of Financial Performance by client ID.
- Configure invoice templates; for recurring billing.
- Manage Human Resources; manage employee qualifications, plan and execute employee appraisals, add industry specific contact information and manage multiple supervisory points. For example employees can have multiple supervisors from each department.
- Execute employee payroll; Liveware Solutions is one of a select few Australian Microsoft® partners with the expertise and resources to have developed a Microsoft® registered add-on payroll module for NAV. This allows configuring and executing employee payroll data across multiple departments, register in advanced annual leave and other absences into the payroll calculations and utilising a variety of industry statutory reporting functions.
